۱.	What are exam	ples of Al applications in y	our everyday life? Select all that	1 / 1 point
	A search er	ngine in an app or on the i	nternet.	
		engine uses Al to quickly be relevant to your search	identify information or resources criteria.	
	Product red	commendations on an eco	mmerce app / site.	
		nendation engine uses AI revious purchases or othe	to make recommendations based r information.	
	A smart spe	eaker responding to your r	equest to play a song.	
		peaker uses AI to interpre g or other information you	t your verbal command and search request.	
2.	Which are exar	mples of Al for Good proje	cts? Select all that apply.	1 / 1 point
	Predicting v	wind energy using historic	al data and weather forecasts.	
		eliable predictions of wind ernative to fossil fuels.	energy can make wind a more	
		ace recognition.		
	Helping to i recordings,	nform medical diagnoses or other data.	based on analysis of images, audic)
	Correct Al can be	used to help with diagnos	sis of various diseases.	
	Identifying i	illegal mining activities in s	satellite imagery.	
		g illegal mining activities c communities.	an help protect the environment	

3.	What is the appropriate description of the "do no harm" principle as applied in AI for Good projects?	1 / 1 point
	According to key metrics, you can show a measurable net improvement to some problem or scenario. Everyone impacted by a project is left improved or unchanged in their status.	
	On balance, those impacted by a project are more likely to have benefited than to have been harmed.	
	Correct That's right. It is not enough to show an improvement to some problem or metric of interest. You need to ensure that everyone impacted by the project is not harmed.	
4	Which of the following would be appropriate statements about the	1 / 1 point
4.	Which of the following would be appropriate statements about the capabilities of AI? Select all that apply.	1 / 1 point
	Al can perform very well on some specific and well defined tasks.	
	 Correct Al can achieve very good performance on some specific and well defined tasks. 	
	The term "AI" refers to a computer program or algorithm that is capable of making decisions or performing inferences based on patterns in data.	
	 Correct AI, at its core, relies on algorithms and computational models that process data to recognize patterns and generate predictions. 	
	In many cases, Al capabilities do not add value as a part of a potential solution.	
	Orrect Al does not always add value to the solution.	
5.	Which of the following is a correct statement about how supervised machine learning works?	1 / 1 point
	Al is a subfield of supervised machine learning.	
	Supervised machine learning is where an algorithm is trained to learn the mapping from some set of inputs to a particular set of outputs. Supervised learning is a form of machine learning where a human developer "supervises" or manually adjusts an algorithm during training.	
	Correct Top work!	

6.	What should be your default when it comes to storing or publishing data that contains personally identifying or private information?	1 / 1 point
	As a default, you should not store or publish personal or private information. As a default, you should store personal or private information securely	
	and not publish it. As a default, you should not store or publish any information that was shared with you privately but it's ok to store or republish data containing personal or private information that was previously made public, like social media posts.	
	Correct Well done! Storing or publishing any personal information, even if it is or was already publicly available before, should be avoided to adhere to the do no harm principle.	
7.	What are some key considerations when it comes to employing the "do no harm" principle in your projects? Select all that apply.	1 / 1 point
	Consider possible negative outcomes in the event that your project fails or even if it achieves expected performance.	
	Correct You should always keep in mind what the impact would be if your project fails and consider all possible outcomes if your project is successful.	
	Consider whether your project could negatively impact someone who would not otherwise be harmed.	
	Do not store or publish personally identifying or other private, sensitive or proprietary information.	
	Correct Any personal data could potentially be harmful if misused, thus it is better to not store it unless absolutely necessary and with the appropriate permissions.	
	Define clear performance metrics for your Al model by which you will measure the success of your project.	
8.	What are some inputs and outputs that could be used in a supervised machine learning application? Select all that apply.	1 / 1 point
	Inputs of digital images and outputs whether or not the image contains a pedestrian.	
	Correct That's right! By showing your model examples of an image and label, in this case, "pedestrian" or "not pedestrian," you can <i>supervise</i> or train the model to recognize pictures of pedestrians. This is an example of the image recognitionapplication of supervised machine learning.	
	Inputs of text in one language and outputs of text in another language.	

Q	Correct Good job! This is an example where you have an input A associated with an output B. This is an example of the machine translationapplication of supervised machine learning.	
~]	Inputs of historical data including things like hours of direct sunlight and solar panel sensor measurements and outputs of power generated from a solar power installation.	
\bigcirc	Correct Fantastic! This is an example where you have an input A associated with an output B. This is an example of the prediction application of supervised machine learning	
reg	a is at the heart of every AI project. What are some key considerations arding data that you have to think about when building your AI solution? ect all that apply.	1 / 1 point
~	Data privacy.	
⊘	Correct Fantastic! Remember the "do no harm" principle and default to private data practices.	
~	The quality and quantity of data required for your project	
Q	Correct That's right! For AI to add value in a project you need to have access to sufficient quality and quantity of data.	
~	Data availability.	
Q	Correct Yes! Without access to data, many Al projects would not be possible.	
~	Data security.	
Q	Correct Good job! Store data securely to ensure that personally identifiable information (PII) or proprietary information does not fall into the wrong hands.	
pre	presented in this course, Al for good projects include the use of Al to vent, mitigate or resolve problems affecting human life or the rironment.	1 / 1 point
0	False	
•	True	
(Correct This is the goal of projects presented in these courses.
